

**BIOHEC-LIFE - Advanced Biodiesel in a circular economy for a low carbon future with public transport**

*[Fri. 29th June 2018 – 15:00 to 17:00 - Athens – Harokopio University, 70 Eleftheriou Venizelou Avenue, Kallithea \(room: Auditorium Georgios Karabatzos\)](#)*

**RREUSE** is delighted to invite you to a workshop organised in the framework of the Biohec Life project to talk about the opportunities offered by the collection of used cooking oil to produce advanced biodiesel.

With its experience in the local, social and eco-friendly collection and transformation of used cooking oil into biodiesel, GECCO (Lille – France) is leading the Biohec Project aiming at developing an eco-designed, compact and flexible demonstrator in order to produce competitively-priced advanced biodiesel. Through partnerships and franchises, the project also aims at developing GECCO's activities beyond France in other European countries.

This workshop will therefore be the occasion for Greek stakeholders interested in renewable energies, sustainable transportation, social economy, energy independence and waste recycling to gather and discuss about the opportunities provided by a sound treatment of UCOs. This event has also been integrated in the **Energy Days** for its relevance with the European Union Sustainable Energy Week organised in Brussels between the 4<sup>th</sup> and the 8<sup>th</sup> of June.

Please follow [this link](#) for registration.

Thanks to interpretation, you will be able to follow this workshop in **English, Greek and French**.

Should you have any questions, please feel free to contact Mathieu Rama ([mathieu.rama@rreuse.org](mailto:mathieu.rama@rreuse.org)).
